

BUSINESS INTELLIGENCE INSIGHTS & RECOMMENDATIONS

AI-Powered SME Business Intelligence Dashboard

Prepared for: Inner Space Interior Design Company | Group 18 Tek4dev 5.1 Capstone Project

Executive Summary

Inner Space Interior Design Company generated ₦2.48 billion in total revenue across 299 projects, converting to ₦716.85 million in net profit at a 28.95% margin — a strong result relative to typical Nigerian SME benchmarks of 15–20%. However, the dashboard exposes two structural risks sitting beneath these healthy headline numbers: a 27% project cancellation rate and ₦842.86 million tied up in unpaid client balances. Left unaddressed, both will quietly erode the margin advantage the business currently enjoys.

₦2.48bn TOTAL REVENUE	₦716.85M TOTAL PROFIT	28.95% PROFIT MARGIN	299 PROJECTS MANAGED
---------------------------------	---------------------------------	--------------------------------	--------------------------------

Key Business Insights

1. Profitable Core, Leaking Pipeline

The business converts revenue to profit efficiently — a 28.95% margin is well above the informal-sector norm. But profitability at the top-level masks funnel inefficiency: of 299 signed projects, only 137 (45.8%) reached completion.

Completed	Ongoing	Delayed	Cancelled
137 projects	6 projects	75 projects	81 projects
45.8% of total	2.0% of total	25.1% of total	27.1% of total

Combined, delayed and cancelled projects (52.2%) represent more than half of all signed work not converting cleanly to closed revenue. Cancellations alone (81 projects, 27.1%) constitute the single largest controllable leak in the business — revenue that was contracted but never realised.

2. Cash Is Trapped with Your Best Clients

Corporate clients are the most valuable segment by revenue (₦1.39 billion combined), but they also hold the largest outstanding balance in the business.

Client Type	Outstanding	Paid	Part Payment
Individual	₦353.17M	₦398.21M	₦332.93M
Corporate	₦489.69M	₦427.15M	₦475.02M
Total	₦842.86M	₦825.35M	₦807.96M

₦489.69 million of corporate revenue is unpaid, against ₦353.17 million for individual clients. Since corporate accounts are the largest revenue driver, this concentration of receivables creates a working-capital constraint: profit is being recognised on paper before cash is actually collected, which can restrict the company's ability to fund new projects.

3. Revenue Is Concentrated Outside the Core Brand Service

The company is positioned as an interior design specialist, yet Interior Design is the lowest-earning service category on the dashboard.

Service Category	Total Revenue	Share of Revenue Analysed
Painting	¥0.51bn	Highest earner
Decoration	¥0.43bn	2nd highest
Renovation	¥0.39bn	3rd highest
Interior Design	¥0.25bn	Lowest — flagship service underperforming

Painting, Decoration, and Renovation collectively outperform the company's namesake service. This is not necessarily a weakness — diversified revenue is healthy — but it does suggest either under-pricing, under-marketing, or under-resourcing of the flagship offering relative to demand for ancillary services.

4. Lead Volume Is Not Yet Linked to Lead Quality

Walk-in, Facebook, Website, Referral, and Instagram all generate meaningful project volume, but the dashboard does not currently cross-reference referral source against project outcome (completed vs. delayed vs. cancelled). This means marketing spend may currently be allocated by volume of leads generated rather than value of leads converted — a gap worth closing given that 81 cancellations are sitting somewhere in that channel mix.

5. Client Satisfaction Is Tracked as a Proxy, Not a Score

The dashboard captures repeat-client status (151 repeat clients, 50.5%; 148 non-repeat, 49.5%) as its satisfaction proxy, but there is no direct numeric satisfaction rating captured per project. A near 50/50 split on repeat business is a soft signal, not a strong one — it cannot currently distinguish clients who left due to service issues from those who simply had a one-off project need.

Strategic Recommendations

1. **Enforce Payment-Gated Delivery for Corporate Clients** — Tie corporate project milestones directly to cash collection. Require a minimum 50% deposit before design work begins and pause active work automatically if a part-payment milestone is overdue by more than 14 days. This is the single highest-leverage action available, since it directly targets the ₦489.69 million currently outstanding from the business's most valuable client segment.
2. **Install an Automated Delay-Alert System** — Flag any project that remains in “Ongoing” status for more than a defined threshold (e.g. 5 days) without a status update and route an automatic alert to the project manager before a milestone deadline is breached. Early intervention on slippage is materially cheaper than recovering a cancelled contract.
3. **Audit Referral Sources for Cancellation Rate, Not Just Volume** — Build a simple cross-tab of cancelled projects against referral source. If any channel (particularly Facebook or Instagram, which currently drive high volume) shows a disproportionate share of the 81 cancellations, reallocate that portion of the marketing budget toward higher-intent channels such as Website leads and direct referrals.
4. **Reposition and Repackage the Interior Design Service Line** — Investigate the pricing, marketing visibility, and resourcing of Interior Design services relative to Painting, Decoration, and Renovation. Consider bundling Interior Design into packages with the higher-revenue services rather than selling it standalone, to lift its share of overall revenue without adding new client acquisition cost.
5. **Secure Vendor SLAs for High-Volume Material Categories** — Formalise Service Level Agreements with key material and contractor vendors for Painting, Decoration, and Renovation supplies, since these three categories jointly drive the majority of revenue and are most exposed to stockout-driven delays.
6. **Introduce a Direct Client Satisfaction Score** — Add a mandatory 1–5 client satisfaction rating at project close-out, captured alongside the existing repeat-client flag. This converts satisfaction from an inferred proxy into a measurable KPI the dashboard can trend over time and correlate against referral source, service category, and project manager.

Closing Note

Inner Space Interior Design Company's financial fundamentals are sound — the priority now is protecting that margin from pipeline leakage and receivables risk rather than chasing additional top-line growth. The six recommendations above are sequenced to address the highest-impact, lowest-effort fixes first: cash collection and delay detection can typically be implemented within a single operating month using the existing Power BI dataset, with no new tooling required.
